2

Outline

- Introduction
- Literature Review
- Computational Framework
- Results & Discussion
- Conclusion & Future Work
- Application Areas

12/4/2017

3

Introduction

- Medical Notes
 - "Pt presents with **hyperlipidemia** and strong family hx of **CAD**. Keeps active with job, kids, and softball, but **no** routine cardio **exercise**."
- Unstructured Data
 - Can't be used as direct input for further processing
- Structured Data
 - Regular pattern and used for further processing

12/4/2017

4

Introduction (cont..)

- Natural Language Processing techniques to solve this problem
- Domain
 - English Language
 - Health care data
 - Medical notes text files
 - Extracted information
 - Diagnosis, Procedure, Drug, Vital and Habits

12/4/2017

5

Objectives

- Propose a new approach to extract meaningful data from clinical notes
- Extract meaningful clinical information from notes
- Store the information for future use
- Compare the effectiveness of the proposed system with some existing system

12/4/2017

6

Literature Review

- MedEX - Xu, H. et.al [2009]
 - Structured data extraction
 - Input Clinical Text:
 - "acetaminophen
 - 325- 650 mg po/pr q4 -6h prn"
 - Structured Output:
 - Drugname: acetaminophen
 - Strength: 325-650 mg, Route: pc/pr
 - Frequency: q4 -6h
 - Necessity: pm
- Limited to Drug Data only

12/4/2017

7

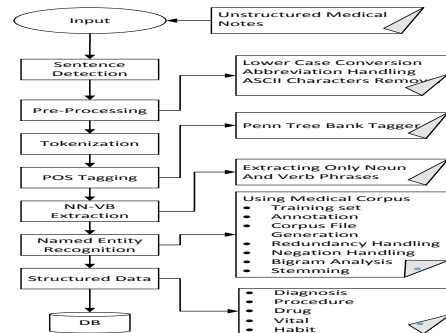

Literature Review (cont..)

- Other relevant systems
 - cTAKES - Sovava, K.G. et. al [2010]
 - YTEX - Glara, V. et. al. [2011]
 - MetaMap - Aronson, et. al. [2001]
 - MEDLEE - Friedman et. al [1994]
- Problems with existing system
 - Less Accuracy
 - Too specific
 - Lot of third party dependencies

12/4/2017

8

Computational Framework

12/4/2017

9

Computational Framework (cont..)

- Input - Medical notes, text files
1. Sentence Detector- ["FBS & hgA1c both slightly improved, but still prediabetes (HgA1c = 5.8%).", "But did instruct on diet/exercise."]
 2. Preprocessing
 - Abbreviation handling: dx -> diagnosis
 - Punctuation handling: don't -> do not
 - Lower case conversion
 - ASCII character removal

12/4/2017

10

Computational Framework (cont..)

3. Tokenizer: 'FBS', '&', 'hgA1c', 'both'
4. Parts-Of-Speech (POS) Tagging:
 - ('FBS', 'NNS') ('&', 'CC') ('hgA1c', 'NNP') ('both', 'DT') ('slightly', 'RB') ('improved', 'VBN')
5. Noun-Verb (NN-VB) Extractor
 - Noun phrases - NN, NNS, NNP, NNPS
 - Verb phrases - VB, VBD, VBG, VBN, VBP, VBZ

12/4/2017

11

Computational Framework (cont..)

6. Named Entity Recognition
 - Detection of elements – Diagnosis, Procedure, Drug, Vital, Habit
 - Medical corpus building, training and matching

12/4/2017

12

Medical Corpus

- 6.1 Medical corpus
 - Training Data Collection
 - 15000 medical notes as training data
 - Health care data

12/4/2017

13

Medical Corpus (cont..)

• Manual Annotation

Pt states her labs were normal but just needs to loose ~20#. States she use to be able to loose **<START:vital> wt <END>** fairly easy but struggles as she gets older. Pt is a RN, works night shift at St Francis. Tries to take aerobics and zumba classes 3x/week. Discussed kcal and carb intake, **<START:habit> exercise <END>** goals, sleep. Pt is to track intake and **<START:habit> exercise <END>** using **<START:vital> myfitnesspal** and f/u x1 month via phone for **<START:vital> wt check**."

Pt presents with PMHx of **<START:diagnosis> diabetes <END>** ~20 yrs. **<START:vital> HgbA1c <END>** way above goal. Pt is on an **<START:drug> insulin pump <END>** and is followed by his **<START:vital> endo q 3 months**. Pt states he struggles with elevated **<START:vital> FBS <END>**. Pt states that he usually always enters his carb intake and will use his bolus before meals. Pt has been through Diabetes Education many times and feels comfortable counting carbs. Pt is an Athletic director and works long hours, eats big meal for dinner and will drink a few beers. Discussed using Carelink to download pump, and talking to doctor re wearing CGM. Will refer pt to Medtronic Rep who has worked with pt and endo in the past to adjust pump settings to get **<START:vital> FBS <END>** w/in goal range.

Pt presents with **<START:diagnosis> diabetes <END>** currently on **<START:drug> Janumet <END>**. Wants to get her **<START:vital> HgbA1c <END>** less than 6.1. Has been using **<START:vital> myfitnesspal** to track intake.

Medical Corpus (cont..)

• Corpus File Generation

- Different files for different corpus

• Redundancy Handling

```

1 diabetes
2 diabetes
3 hydrocephalus
4 shunt malfunction
5 diabetes
6 diabetes
7 diabetic
8 diabetes
9 diabetes
10 diabetes
11 diabetes
12 diabetes
13 hyperlipidemia
  
```

Redundant information

12/4/2017

15

Entity Detection

id	sent_id	note_id	sent_id	detected_element	element_type	updated_date
121445	sent2	Note_Number-221:	Sent_Number-4:	exercise	habit	2017-09-01 10:57:53
121453	sent2	Note_Number-221:	Sent_Number-2:	chol	vital	2017-09-01 10:57:53
121977	sent2	Note_Number-217:	Sent_Number-5:	lab	procedure	2017-09-01 10:57:53
121968	sent2	Note_Number-217:	Sent_Number-2:	chol	vital	2017-09-01 10:57:53
121954	sent2	Note_Number-215:	Sent_Number-3:	nrtz	procedure	2017-09-01 10:57:53
121941	sent2	Note_Number-213:	Sent_Number-4:	chewing	habit	2017-09-01 10:57:53
121915	sent2	Note_Number-211:	Sent_Number-2:	chewing	habit	2017-09-01 10:57:53
121289	sent2	Note_Number-210:	Sent_Number-4:	diab	diagnosis	2017-09-01 10:57:52
121283	sent2	Note_Number-210:	Sent_Number-3:	diab	diagnosis	2017-09-01 10:57:52

12/4/2017

16

Additional Components

6.2 Negation Handling

- Negative words, no, none, free etc

6.3 Bigram Analysis

- Bigram Generation
- Bigram Detection

6.4 Stemming

- Porter Stemmer
- Stemmed Corpus file
- Stemmed NER

12/4/2017

17

Results & Discussions

• Types of Test Results

Test		Condition	
		Present	Absent
	Positive	True Positive (TP)	False Positive (FP)
	Negative	False Negative (FN)	True Negative (TN)

12/4/2017

18

Results & Discussions (cont..)

• Accuracy Parameters

$$\text{Total Accuracy} = \frac{TP+TN}{TP+FP+TN+FN}$$

$$\text{Precision} = \frac{TP}{TP+FP}$$

$$\text{Recall} = \frac{TP}{TP+FN}$$

$$F - \text{Score} = \frac{2 * \text{Precision} * \text{Recall}}{\text{Precision} + \text{Recall}}$$

12/4/2017

19

Results – Varying Corpus Size (cont..)

- Accuracy Vs. Training Data Size

12/4/2017

21

Results – Comparison with MedEX

12/4/2017

23

Future Works

- Corpus size can be increased
- Can be extended to detect other medical information and further parts of speech
- To build a learning system which will allow to add more undetected true positive elements in corpus
- Can be extended to work on speech and visual data
- Trigram & further n-gram analysis
- Other accuracy parameters like Specificity

12/4/2017

20

Results – Varying Test Data

- 4 different test set

12/4/2017

22

Conclusion

- ▀ Able to extract meaningful information
- ▀ Results saved in database
- ▀ Accuracy improved
- ▀ Contribution to the knowledge
 - ▀ Medical Corpus 15000+ notes.
 - ▀ Integrating the techniques of negation handling, bigram analysis and stemming in same system
- ▀ More generalization
- ▀ Improved accuracy

12/4/2017

24

Application Areas

- Extracting information from
 - Family history
 - Discharge summary
- Automatic reporting
- Developing standards
- Machine learning
 - Prediction systems
 - Suggestion systems

12/4/2017
